

ATLIQ HR PRESENCE INSIGHTS (April–June 2022)

INSIGHT 1: Attendance dropped significantly in May (89.7%), making it the lowest-performing month.

Attendance declined from **94% in April** to **89.7% in May**, with multiple days falling below 85%.

RECOMMENDATION

HR should investigate the causes through short employee surveys or manager check-ins, focusing on workload pressure, team dynamics, and external factors affecting May attendance.

INSIGHT 2: WFH usage spiked in May (11.2%), the highest in the quarter.

WFH increased sharply, especially early May (peaking at 23.4%).

RECOMMENDATION

Review WFH requests and patterns for possible burnout or operational inefficiencies and consider implementing guidelines for balanced on-site and remote work.

INSIGHT 3: Sick Leave percentage peaked in May (1.7%), much higher than April (0.4%).

Several SL spikes indicate possible health concerns or workload stress.

RECOMMENDATION

Introduce wellness initiatives, ensure appropriate workload distribution, and encourage preventive health practices to minimize spikes in sick leaves.

INSIGHT 4: Fridays consistently show the lowest attendance and highest WFH % across all months.

Friday attendance stays around **88–90%**, while WFH spikes up to **16%**.

RECOMMENDATION

Formalize a **Flexible Friday / Hybrid Friday** policy to align with natural employee behavior rather than enforcing strict on-site expectations.

INSIGHT 5: A few employees significantly underperform in attendance (e.g., Trystan Ortega, Zaiden Wheeler).

Trystan's June attendance drops to **45.5%**, creating a major anomaly.

RECOMMENDATION

HR should conduct individual meetings for these employees to identify attendance challenges and develop improvement/action plans.

INSIGHT 6: Attendance dips follow a recurring pattern around the 8–12th of each month.

This mid-month decline is visible in all three months.

RECOMMENDATION

Analyze project cycles or workload peaks to understand if mid-month deadlines are driving absenteeism, and adjust planning if needed.

INSIGHT 7: WFH spikes frequently follow Sick Leave spikes.

Employees often switch to WFH after sick leave days, indicating recovery periods.

RECOMMENDATION

Allow temporary **post-SL recovery WFH** as a formal option while monitoring productivity, ensuring it doesn't convert into misuse.

INSIGHT 8: Overall attendance remains healthy at ~92% for the quarter.

Despite May fluctuations, the quarterly trend is stable.

RECOMMENDATION

Continue current attendance policies but strengthen monitoring of low-performing individuals to maintain overall performance.

INSIGHT 9: SL% shows an increasing trend from April → May → June.

The rising sick leave pattern may signal stress, fatigue, or external conditions.

RECOMMENDATION

Introduce structured wellness programs (health camps, stress workshops, or optional leave days) to reduce illness-related absenteeism.

INSIGHT 10: WFH trends show employee preference for hybrid work.

WFH stabilizes around 9–11%, with peaks indicating natural flexibility demand.

RECOMMENDATION

Refine hybrid work policies to create a balanced, productivity-oriented model aligned with employee preferences.

MONTH-WISE INSIGHTS

APRIL

Attendance: 94.0% (Highest across 3 months)

- Strong presence across employees.
- Mid-month dip around April 11–14 (~92%), followed by recovery.

WFH %: 9.1%

- WFH mostly stable between 5–10%.
- Minor uptick near month end (16.4%).

Sick Leave %: 0.4% (Lowest SL%)

- Very low sick leave, almost negligible.
- Only a couple of SL spikes (2.4% around early April).

Day of Week Patterns

- **Worst attendance: Thursday (90.3%)**
- **Best attendance: Monday (96.5%)**
- **Highest WFH: Friday (12.2%)**

Interpretation: April shows healthy presence, low sick leave, and mild WFH usage. No major issues.

MAY

Attendance: 89.7% (Lowest of all months)

- Significant drop from April's 94%.
- Several days show dips below 90% (e.g., 78.4%, 77.9%).

WFH %: 11.2% (Highest of all months)

- Noticeable increase especially early May (23.4% spike).
- Weekday-wise:
 - **Highest WFH: Friday (15.9%)**

- **Lowest WFH: Tuesday (8.7%)**

Sick Leave %: 1.7% (Highest SL%)

- More SL spikes (2.7%, 1.9%, 3.0%).
- Could be seasonal factors or workload stress.

Employees with Low Attendance

- Trystan Ortega – 77.3%
- Weston Horton – 86.4%
- Sofia Solis – 86.4%

Interpretation: May shows signs of stress or disengagement — highest WFH, highest SL, lowest attendance.

JUNE

Attendance: 91.7% (Recovery after May dip)

- Improved vs May.
- Several dips around June 10–12 but stabilizes after 13th.

WFH %: 9.5%

- Less WFH compared to May.
- End-of-month WFH spikes (16.4%).

Sick Leave %: 1.2%

- Lower than May, higher than April.
- A major SL spike around June 13 (3.8%).

Employee-level concerns:

- Zaiden Wheeler – 80%
- Trystan Ortega – 45.5% (!! Major concern)

Interpretation: June stabilizes; however, a few individuals contribute disproportionately to attendance decline.

OVERALL Q2 INSIGHTS (April–June)

1. Attendance steady at ~92% but declining pattern in May

- April: 94.0%
- May: **89.7%** (drop of ~4.3%)
- June: 91.7%

May is the weakest month — focus area for HR interventions.

2. WFH shows an upward usage trend

- April: 9.1%
- May: **11.2%**
- June: 9.5%

May's spike aligns with lower attendance and higher sick leave → possible burnout or workload imbalance.

3. Sick Leave trending upward

- April: 0.4%
- May: **1.7%**
- June: 1.2%

A clear signal of seasonal sickness, stress, or possible underreporting earlier.

4. Fridays show the most drop in attendance & highest WFH

Across all months:

- **Friday attendance is lowest (~88–90%)**
- **Friday WFH is the highest (12–16%)**

Strong weekly behavioral pattern — employees prefer flexible work before weekends.

5. Attendance issues are concentrated in a few specific employees

Consistently low:

- **Trystan Ortega** – 81% → 77% → 45%
- **Zaiden Wheeler** – ~80% (June)
- **Sofia Solis & Weston Horton** – mid-80s

These individuals need HR follow-up.

BEHAVIORAL & PATTERN INSIGHTS

1. Attendance drops near month-beginning and mid-month

Patterns seen around:

- April 10–12
- May 8–10
- June 9–12

Possible reasons:

- Workload peaks
- Project cycles
- Personal schedules
→ Needs evaluation.

2. Spikes in WFH occur near weekends or after SL spikes

Suggesting:

- Extended weekend usage
- Employees recovering from SL through WFH

3. High SL + High WFH in May = Potential Burnout Indicator

HR should consider:

- Workload analysis
- Team-level stress checks
- Wellness initiatives
